Sodium-vapor lamp - a gas discharge lamp that uses sodium in an excited state to produce light. Two types of such lamps: *low pressure* and *high pressure*.

![A low pressure sodium streetlamp](image)

![Spectrum of a low-pressure sodium lamp](image)

Spectrum of a low-pressure sodium lamp. The intense yellow band is the atomic sodium D-line emission, comprising about 90% of the visible light emission for this lamp type.
